

Useful tools to help you with presentation skills in Seminars

In terms of getting better with pronunciation, 'Text-to-speech (TTS)' tools are useful software programs or online services that convert text into spoken audio. There are both free and paid options available, and they can be useful for a variety of purposes, including aiding in language learning, providing accessibility for individuals with visual impairments, and more. Here are some notable free TTS tools:

1. [Google Text-to-Speech](#): Google offers a free TTS service that can be used on Android devices. It's integrated into the Android operating system and can read aloud text from various apps and content on your device.
2. [Microsoft Immersive Reader](#): Microsoft's Immersive Reader is a free tool designed to improve reading and comprehension. It's available in various Microsoft applications, including Word, OneNote, and Edge.
3. [Natural Reader](#): Natural Reader offers both free and paid versions. The free version allows you to convert text to speech, and it's available as a web app or a downloadable software for Windows and macOS.
4. [Balabolka](#): Balabolka is a free text-to-speech software for Windows. It allows you to save the generated speech as an audio file and supports various text formats.
5. [Read Aloud \(Chrome Extension\)](#): This is a free extension for Google Chrome that can read web content aloud. It's useful for online articles and web pages.

These free text-to-speech tools can be handy for a range of purposes, including listening to written content, enhancing language learning, and improving accessibility for people with visual impairments. The quality of voices and features can vary among these tools, so it's a good idea to explore and find the one that best suits your specific needs. These are great to put the notes for presentations into and then hear how the words should be pronounced when practicing your presentations.

Free digital tools to help break presentation materials down into easy-to-understand slides:

If you're looking for free digital tools to help you understand articles and create summaries, here are some options:

1. [SMMRY](#):
 - SMMRY is a free online tool that can summarize articles, blogs, and other text-based content. You can paste the text or provide a URL, and it will generate a summary with adjustable length.
2. [Resoomer](#):

- Resoomer is a free web-based summarization tool. It's user-friendly and can generate summaries of web content, articles, or documents you paste into the tool.

3: [Quillbot](#)

- Quillbot is a straightforward tool that can create summaries from text you paste into it. It allows you to control the length of the summary.

4. [TextTeaser](#):

- TextTeaser is a free online tool for automatic text summarization. It lets you input text and specify the number of sentences you want in the summary.

5. Google Docs:

- Google Docs includes an Explore feature that can help you summarize and extract key points from text. This feature can be particularly useful for students and professionals.

6. [Microsoft Word \(AutoSummarize\)](#):

- If you have Microsoft Word, it includes an AutoSummarize feature that can create summaries of documents. While it's not a separate tool, it can be handy for document summarization.

Remember to review the summaries generated by these tools to ensure accuracy and coherence, as automatic summarization can sometimes miss contextual nuances. The effectiveness of these tools may vary depending on the complexity and length of the source material.
